

Description

StrataSol is a range of concentrated liquid trace element products with superior handling characteristics produced using the highest grade raw materials. The StrataSol range is available in Zinc, Copper, Manganese and Zinc Manganese. StrataSol products allow for improved nutrient targeting to increase efficiency and maximise benefits of trace element spend.

Advantages

- Labeled for use as a seed dressing, banded below the seed and as a foliar application
- Specifically formulated for handling with CSBP liquid fertilisers, including the Flexi-N range
- Able to be tank mixed with a wide range of pesticides
- Small particle size to maximise plant uptake by both roots and leaves
- Flexibility to tailor trace element requirements to specific soil types and farming systems
- Easy to handle through pumps and liquid carts
- Improved distribution of trace elements when banded in the soil through a liquid stream
- High concentration of active ingredients means lower rates required

Packaging

StrataSol® products are available in 10L drums for convenient handling (eligible for drumMUSTER). The range is also available in 550L bulki boxes.

Technical Specifications:

Product	Active Ingredient	Typical Analysis (w/v%)*
StrataSol Zinc	700 g/L Zinc Oxide	70% Zinc
StrataSol Copper	500 g/L Copper Oxide	50% Copper
StrataSol Manganese	500 g/L Manganese Carbonate	50% Manganese
StrataSol Zinc Manganese	300 g/L Zinc Oxide and 300 g/L Manganese Carbonate	30% Zinc and 30% Manganese

* Analysis used to calculate nutrients per hectare when applying product in litres (eg applying 1L/ha of StrataSol Zinc will apply 700g/ha of Zinc)

Application

General Instructions:

- Agitate thoroughly before use
- Do not apply under adverse environmental conditions.
- Only mix a maximum of one day's requirements as settling may occur
- Refer to StrataSol labels for information on recommended rates

Seed Treatments:

Ensure even application of StrataSol over all seed. Dilution in water can aid application. A combined volume of approximately 10L/t of water and product is recommended. Treated seed must be used in the season in which it is treated.

Tank Mixes:

Mixing order is important. When tank mixing with StrataSol, always add 20% water to the mix.

1. Add water (20% is ideal) and commence good agitation
2. StrataSol Products – add separately do not pre-mix together
3. Pesticides
4. Liquid Fertiliser (e.g. Flexi-N)

Dosatron:

Dilute with a minimum of 2 parts water to 1 part StrataSol. Ensure constant agitation to avoid settling in nurse tank. Mix only enough product for immediate use.
